Here's a cusck breakdown of the test: Begin this test at 87 MPH. Reach the middle of fifth year and hit IIO MPH before you begin to brake

Downshift to second gear, and your speed should be down to 30 MPH as you slide through the turn. @ Hold IIO MPH through the secand (and easier) turn. Cross the firish line at 90 MPH and you're doing very well-if not

Curriculum

This test is the first real hard one. mainly because you'll need to wasp the concept of full opposite look before you can even begin to take a run at the gold. Opposite lock is when your car is sliding one way. and your wheels are turned in the complete opposite direction.

Drifting Techniques I

DIFFICULTY: MODERATE

If nothing else, this test is just four consecutive very low speed turns with gobs and gobs of induced oversteer (or opposite lock) to get you through the curves with maximum speed. Look to hold between 30 and 50 MPH throughout the entire series of turns.

Drifting Techniques II

## Curriculum

This set of 180-degree hairpins recurres the same technique used in B-6, but in a greater degree due to the speed and sharpness of the turns. Start off at 75 MPH before brakens ever so sightly as you noke through the kink at 62 MPH. Immediately following the kink, bring your speed down in the safety range of 20 to 40 MPH for the remainder of the harryins. Remember, full opposite lock for the gold-nothing else works.

Raily License Final Exam DIFFICULTY: WERY HARD

#### Curriculum

Here are some itemized tips: @ If you have golds on the two previous tests, then you have the hardest parts of this track mastered. If not, we highly recommend you go back and earn those first. A It's critical to hit at least 90

MPH in fourth gear on the main straight before braking into Turn 14. Attaining this type of speed means you're really carrying exit speed very well. @ If all cise fails, refer to our main

A good launch is important for building up speed on the front half of this test. In fact, you should hit IIO MPH if only for a millisecond before you brake for the corner. Curriculum

See up like a skidpad. A-4 is just a really basic test of throttle control and steering correction. Push the rotary engine up to about 60 MPH in third year and leave it there. For best results, follow the very inside corner of the trackalong the thin white and red lineand try to keep your speed between 60 and 70 MPH. No braking is necessary during this test, just focus on keeping your car from losing its tail and your speed in the "erren zone" listed above. ## A License Final Exam DIFFICULTY: MODERATE

#### **Furriculum**

A much larver version of A-4, A-5 is the same exact test with even more speed and more steering control. Because of the larger turning radius, it's actually much easier to keep your car in line. It's best to hover precisely between 84 and 88 MPH to earn the gold. If you're having trouble keeping your car on the track at those speeds (which is very likely the first few tries), try staying around 78 to 80 MPH for the bronze.

#### Curriculum This is the first test that starts your

car in motion around 95 MPH Stay on the throttle until you hit II9 MPH (just into fourth gear), then immediately downshift into third and brake. You're on the brakes for only half a second at these speeds, at which point you quickly switch to oure acceleration as you punch out of the first corner. Apply the same technique to the second curve, but you should be entenny at 84 MPH and leaving at about 78 MPH. You should cross the finish line at precisely II6 MPH in third pear

#### Curriculum

You cross the starting line at around 73 MPH. Aim to hit 92 MPH at the top of the hill before you get on the brakes. (And before you ask about the iumps, there is NO way to avoid them if you want the eold.) Instead of braking hard and actually steering through the turn, the Camaro ZZ8 does a better iob powerdidne rishs over the little blue and white humber on the inside corner of the turn. You should come through with enough speed to just graze the outside wall as you head for the finish line at roughly 78 MPH.

#### Curriculum

You'll take control of the Lancer Evo IV GSR at 100 MPH. In lust a few seconds, you should be able to build up to 110 MPH. Hold that speed through the first chicane and all the way up through the sharp 45-degree turn thereafter, Brake steady and hard to kick out your rear end, then get on the throttle and you should be right around 45 MPH as you get the corner if you exited and took this turn correctly, you should be able to cross the fnish line at 78 MPH or greater
